

vSEC:CMS Secure Operator Token

Brand: Versasec
Product Code: SMAV100MST

Short Description

vSEC:CMS Secure Operator Token incl Operator Token Licence.

Description

vSEC:CMS T-Series version 4.1

The system is fully functional with minidriver enabled smart cards and it streamlines all aspects of smart card administration by connecting to enterprise directories, certificate authorities and other backend systems such as physical access control systems using RFID. With the vSEC:CMS T-Series, organizations can issue smart cards to employees, personalize the smart card with authentication credentials and manage the lifecycle of the smart card.

When the projects get larger (in terms of users and or locations), there is a streamlined upgrade path to vSEC:CMS S-Series.

Product News

vSEC:CMS T-Series version 4.1 is now available.

New in this version:

- New virtual smart card: vSEC:CMS Virtual Smart Card -with support for MS

Windows 7 and later

In this downloadable version, the hardware token that the system is normally preloaded on, is simulated by software. This way you get the same experience as using the hardware token directly on your Windows PC by just downloading and running a quick installer. Email info@smartjac.com for more details.
