UltraCard® PC is ideal for laser engraving applications and is compatible only with High Definition Printing (HDP®) technology. 100% Polycarbonate cards compatible with retransfer printing and laser engraving.

Description

Overview

UltraCard® PC - Polycarbonate ID Cards

UltraCard® PC is the ideal card for use with reverse transfer, laser engraving printers. Made of a 100% polycarbonate construction, UltraCard PC cards are fully compatible with laser engraving, which can be used to add a secure, counterfeit resistant and tamper-evident layer of security to your card personalization. UltraCard PC cards are highly durable and offer a longer expected card life than other common card types like PVC or PVC/PET composite.

Key Features

- Clean, glossy surface
- Compatible with fluorescent printing applications
- Compatible with laser engraving
- Durable, delamination resistant card construction
